The Digital Dictatorship Is Coming — Can We Stop It?

Historian and professor Yuval Noah Harari warns if we allow the establishment of a digital dictatorship, where the system, be it a corporation or a government, knows the most intimate details about each and every person, it will be impossible to dismantle it.

Story at-a-glance:

- According to Klaus Schwab, founder and executive chairman of the World Economic Forum (WEF), the goal of The Fourth Industrial Revolution is to change what it means to be human by merging man and machine.
- Humans are now "hackable," in that technology now exists by which a company or government can know you better than you know yourself, and that can be very dangerous if misused.
- Professor Yuval Noah Harari predicts that algorithms will increasingly be used to make decisions that have historically been made by humans, either yourself or someone else, including whether or not you'll be hired for a particular job, whether you'll be granted a loan, what scholastic curriculum you will follow and even who you will marry.
- Harari warns that if we allow the establishment of a digital dictatorship, where the system, be it a corporation or a government, knows the most intimate details about each and every person, it will be impossible to dismantle it. Its control will be total and irreversible.
- If you believe that your thoughts and behavior are and always will remain under your own control, think again. We already have the technology to directly alter thoughts, emotions and behavior.

Dr. Yuval Noah Harari, Top Advisor to Klaus Schwab. HUMANS ARE 'HAC...

According to Klaus Schwab, founder and executive chairman of the World Economic Forum (WEF), the goal of The Fourth Industrial Revolution is to change what it means to be human by merging man and machine.

In short, while the term "transhumanism" is not being used, that's exactly where the global cabal intends to take us, willing or not.

In a November 2019 interview with CNN, history professor and bestselling author Yuval Noah Harari, a Klaus Schwab disciple, warned that "humans are now hackable animals," meaning, the technology now exists by which a company or government can know you better than you know yourself, and that can be very dangerous if misused.

He predicted that algorithms will increasingly be used to make decisions that historically have been made by humans, either yourself or someone else, including whether or not you'll be hired for a particular job, whether you'll be granted a loan, what scholastic curriculum you will follow and even who you will marry.

Profound dangers ahead

There's also an ever-increasing risk of being manipulated by these outside forces that you're not even fully aware of. Looking back over the last two years, it's rather easy to confirm that mass

manipulation is taking place at a staggering scale and that it's phenomenally effective.

As noted by Harari in 2019, the available capabilities already go far beyond Orwell's "1984" authoritarian vision, and it's only going to become more powerful from here. He's certain that in short order, there will be the ability to monitor your emotional state through something as simple as a wearable wristband.

You may dutifully smile and clap when listening to a speech by a government official, but they'll know you're angry or don't agree with what's being said, and could therefore take action against you based on your most personal, internal emotions rather than what you outwardly express.

Importantly, Harari warned that if we allow the establishment of this kind of digital dictatorship, where the system, be it a corporation or a government, knows the most intimate details about each and every person, it will be impossible to dismantle it.

Its control will be total and irreversible. And, Harari believes we may have only a decade, at most two, to prevent this digital dictatorship from taking over.

Reengineering life itself

Harari also discussed the coming transhumanism at the WEF's 2020 annual meeting in Davos (above), and in this speech, he went even further. Not only does the global elite have the technological capability to create a global digital dictatorship, but "elites may gain the power to reengineer the future of life itself," he said.

Harari continued:

> "For four billion years, nothing fundamental changed in the basic rules of the game of life. All of life was subject to the laws of natural selection and the laws of organic biochemistry. But this is now about to change.
>
> "Science is replacing evolution by natural selection with evolution by intelligent design, not the intelligent design of some god in the clouds, [but] OUR intelligent design, and the design of our 'clouds,' the IBM cloud, the Microsoft cloud. These are the new driving forces of evolution."

It's hard to determine whether Harari is for or against transhumanism. He speaks of it as an inevitability and something that can be used for tremendous good. But he also recognizes its profound dangers and seems to believe we need to discuss how these technological capabilities can be used, and whether they should.

In the featured Davos speech, it sounds as though he's a proponent of this human intelligent design venture, but in his 2019 interview with CNN, he also stated that "we must never underestimate the stupidity of humans."

The fact that we have the technology to design new life forms, including new kinds of humans,

does not necessarily mean that we're smart enough to design something better than what natural evolution has come up with thus far.

In his Davos speech, Harari also pointed out that science is now enabling us to create life not only in the organic realm but in the inorganic realm as well. We're talking about "living" robots and the like.

He also raises the question as to who "owns" your DNA, if it can be charted and hacked. Does it belong to you, a corporation or the government?

'The days of free will are over'

Whatever Harari's true feelings about transhumanism, he emphatically states that the idea that we have a soul and free will, those days "are over."

In other clips that have been inserted into the featured video, Harari predicts that in the future, people will be able to look back and see that the COVID pandemic was the turning point where biological surveillance took over and became the norm.

The explanation for how that was able to occur is given by Schwab, who has publicly admitted (see featured video) that participants in the WEF's Young Global Leaders program have "penetrated the cabinets" of many world governments.

In Canada, for example, about half the politicians, including Prime Minister Justin Trudeau, have taken Schwab's training.

Schwab is all about ushering in transhumanism and changing what it means to be human, and his minions of global leaders are sure doing everything they can to make those dreams a reality.

This is a dystopian future WEF and its global allies are actively trying to implement, whether humanity at large agrees with it or not.

Changing what it means to be human

Is Klaus Schwab the Most Dangerous Man in the World?

Schwab dreams of a world in which humans are connected to the cloud, able to access the internet through their own brains. This, of course, also means that your brain would be accessible to people who might like to tinker with your thoughts, emotions, beliefs and behavior, be they the technocratic elite themselves or random hackers

If you believe that your thoughts and behavior are and always will remain under your own control, think again.

We already have the technology to directly alter thoughts, emotions and behavior. Some of these capabilities are described in a 2021 project report by the UK Ministry of Defense, created in partnership with the German Bundeswehr Office for Defense Planning.

The report says:

> "Human augmentation can 'directly enhance behavior.' And if you can change a person's behavior in a positive way, you can also control it to the person's own detriment."

The report, "Human Augmentation — The Dawn of a New Paradigm, a Strategic Implications Project," reviews the scientific goals of the UK and German defense ministries, and they are precisely what the title suggests. Human augmentation is stressed as being a key area to focus on in order to win future wars:

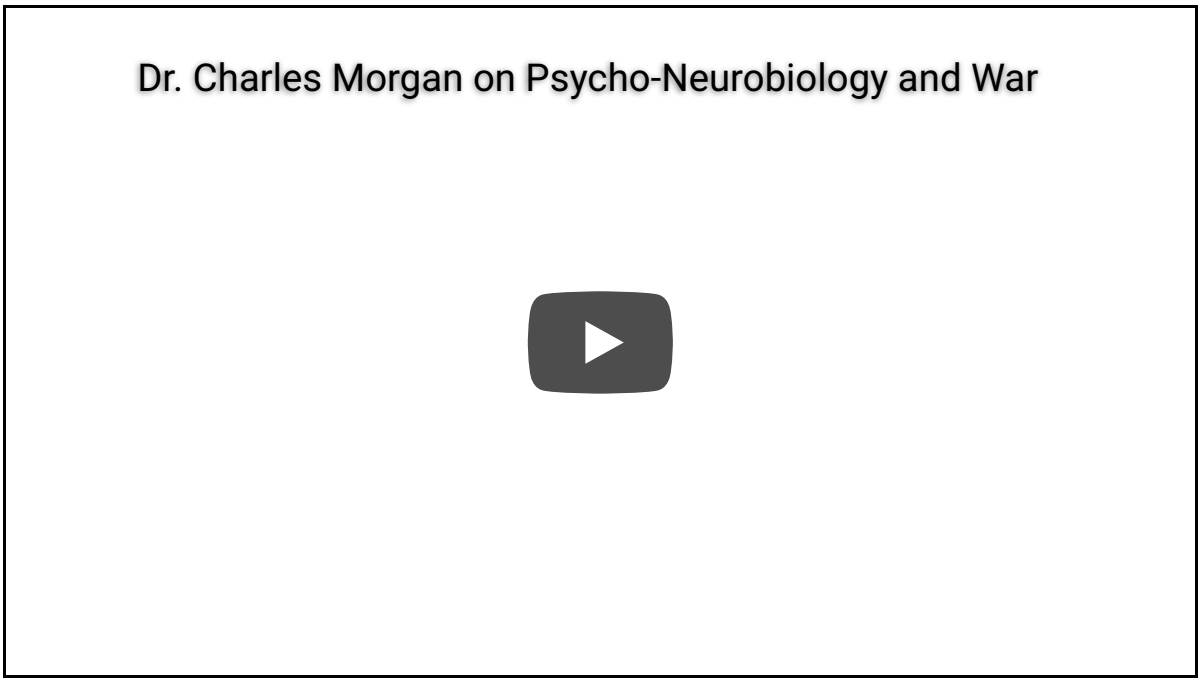
> "Human augmentation will become increasingly relevant, partly because it can directly enhance human capability and behavior and partly because it is the binding agent between people and machines."

Keywords I'd like to draw your attention to are the affirmation that human augmentation can "directly enhance behavior." If you can enhance behavior, that means you can change someone's behavior. And if you can change a person's behavior in a positive way, you can also control it to the person's own detriment.

Theoretically, absolutely anyone, any random civilian with a brain-to-cloud connection and the needed biological augmentation (such as strength or speed) could be given wireless instructions to carry out an assassination, for example, and pull it off flawlessly, even without prior training.

Alternatively, their physical body could temporarily be taken over by a remote operator with the prerequisite skills. Proof of concept already exists and is reviewed by Dr. Charles Morgan, professor in the department of national security at the University of New Haven, in the lecture below.

Using the internet and brain implants, thoughts can be transferred from one person to another. The sender can also directly influence the physical movements of the receiver.



Project immortality

Historically, the striving for immortality has been a faith-based venture, based on the idea that the soul is immortal while the body perishes, which is a concept I am in complete alignment with. Transhumanists more or less reverse this idea.

They discard the notion of soul altogether and aim for the preservation of the perceived personality, first through radical life extension of the physical body, and later through the transfer of brain data into a replacement form.

According to Dmitry Itskov, the Russian founder of the Immortality 2045 project, only 2% of

people are ready to accept death — a statistic that he uses to justify the search for immortality through things like artificial organs, artificial body constructs, the simulation of mental processes and ultimately, the transferring of one's mind into an artificial carrier.

The goals of this project include not only the creation of the cybernetic technologies needed to achieve an immortal body, but also the creation of "a new philosophical paradigm for humanity." Schwab has talked about the same thing, using the term "social contract" rather than "philosophical paradigm."

BUY TODAY: Robert F. Kennedy, Jr.'s New Book — 'The Real Anthony Fauci'

The Immortality 2045's vision, published in 2011, starts with the creation of the first robotic copy of a human body that can be remotely controlled by 2020. By 2025, they want an avatar into which the human brain can be transplanted at the end of life.

By 2035, they want an avatar with a synthetic brain, into which the human personality can be transferred and, by 2045, they imagine a holographic-like avatar.

Itskov said:

> "The aim of the first project, known as 'Avatar,' is the creation of a robot copy of a human being controllable through a 'brain-computer' interface. When I'm asked to give the gist of this project, I tell people to recall the film 'Surrogates,' which depicts a world in which every person has an artificial body that he controls remotely.
>
> "The makers of that blockbuster put an accent on the negative side of such a scenario. Nonetheless, the film's highly graphic demonstration of the idea allows one to get an immediate sense of what it is."

Does living through an avatar sound like a life devoid of spirituality to you? Not so, Itskov says, because by ending our dependency on our physical bodies, "many things will open up spiritually."

I have my doubts about that, as most spiritual adepts will tell you that being hooked on technology tends to hinder rather than elevate spiritual pursuits, which are most easily achieved by living simply, in close contact with the natural world.

I just don't foresee being able to elevate spiritually when any number of outside parties can access your brain and dictate what you think, feel and believe.

Transhumanists like Itskov tend to focus only on the perceived benefits of synthetic life. For example, he promises that his avatars will be affordable for everyone who wants them, regardless of income bracket.

Yet the WEF has clearly announced that by 2030, nobody will own anything, and while not clearly stated, that will likely even include your own body. So, to think that your avatar would be "yours" is probably unrealistic.

Looked at through the lens of the WEF's Fourth Industrial Revolution, it seems the plan is for the elite to literally own all of humanity, which will be refashioned to their own liking.

And, if people can be hacked and controlled remotely, then we can be sure they will be. That's particularly true for synthetic or mechanical avatars that can't "live" or remain "conscious" without a cloud connection.

Resource to understand the transhuman agenda — blockchained

Corey Lynn is a top-notch investigative journalist who covers topics the mainstream won't touch, including the transhumanist agenda. On her website, Corey's Digs, you can find select chapters from her book, "Global Landscape on Vaccine ID Passports."

Chapter 4 in the book is titled "Blockchained," which explains what digital identity is all about. Digital ID is not just a piece of identification, with which you can prove who you are.

It will collect and monitor ALL of your data, from your personal finances, education, work history, GPS location 24/7, everything you've ever typed on your computer, your search history, social media presence, emotional status and physical biometrics, down to your DNA.

I will only cover a minor part of that chapter here, the part on human augmentation and artificial intelligence (AI), so for more, be sure to browse through her website or, better yet, read her book, which can be purchased on her site. The digital PDF is only $9.95 and a print copy is $19.95.

Big data, data sharing and AI

Make no mistake, transhumanism is the ultimate goal of the technocratic elite, and both "big data" and AI are integral components of that.

Without one or both of those, the transhumanist dream is dead in the water. The goal of transhumanism is undoubtedly why there's been so much focus on those two areas in the first place.

So, remember, data gathering, data sharing and AI are not about making your life more convenient. They're to make you obsolete. The intention is to replace you with a synthetic copy of you that can be remotely controlled.

In 2021, the Organization for Economic Co-operation and Development (OECD), an intergovernmental organization that consists of 38 countries that work with various working groups and policymakers, issued a report on the "State of Implementation of the OECD AI principles."

So far, 46 countries have adopted these AI principles.

The strategy is to develop centralized repositories of public datasets in each country, and then enable public-private data sharing to build a vast network where each dataset is connected with all the others.

Biosecurity will be used to justify surveillance tyranny

Another report, by the National Security Commission on Artificial Intelligence, founded "to advance the development of artificial intelligence" and "comprehensively address the national security and defense needs of the United States," highlights the need to combat digital disinformation and prioritizing biosecurity.

To help with that, a U.S. government-funded supercomputer is being set up at the Oak Ridge National Laboratory under the direction of the Department of Energy. This AI supercomputer can do more than 1 quintillion calculations per second.

Some of this data sharing is already taking place. As noted by Corey, NATO launched an in-house biometrics system for data sharing between nations in November 2020, and in May 2021, the U.S. military merged its biometrics-enabled watch list with the Department of Defense's automated biometric identification system.

"They are working on multi-modal fusion matching and improving biometric face-matching capability through AI and machine learning, and have already improved their long-range infrared cameras," Corey writes. "Looking toward the near future, they are also focused on palm print biometrics, faces in crowds, integration to identify threats online, and non-traditional latent DNA collection."

We need biometric privacy laws NOW

While surveillance science is moving at lightning speed, regulations and privacy laws are trailing at a snail's pace. A federal biometric privacy bill, the National Biometric Information Privacy Act, was introduced in 2020 but didn't go anywhere. As noted by Corey, it could be resurrected if enough people speak up.

In the U.S., a handful of states do have biometric privacy laws, Illinois' being one of the strictest, but the vast majority have no such protections in place. As reported by Corey:

> "The Illinois Biometric Information Privacy Act (BIPA) requires private entities to inform people in writing that their information is being collected and stored, what the purpose is, and term for collection and storage, and must secure a written release from the person.
>
> "Those same private entities are not allowed to sell, lease, trade, or profit from a person's biometric information. A person may file suit at $1,000 for each negligent violation or $5,000 for each intentional or reckless violation, plus attorneys' fees and costs. Actual harm is not required to establish standing."

Clearly, we need these kinds of protections everywhere, in all states and all countries, because as it stands, the global cabal of transhumanist technocrats are building a data-sharing system that is intended to become global.

The lack of legal protections against data collection, analysis and sharing is what allows this reckless expansion of surveillance.

As noted by Corey:

> "If it's not crystal clear by now, globalists and eugenicists (sometimes one in the same) are running the show, and they are working very hard at achieving their ultimate desires of a controlled human race, evolution of transhumanism with a strong artificial intelligence taking the place of many humans, while they fly to Mars during their years of immortality, and observe humanity through endless surveillance systems. But their dream only becomes a reality if people allow it to."
